4. WIFI Module Configuration Step:

- Method 1 (Intelligent network connection mode):
 - Step 1:

Manually enter the intelligent network connection mode: press button " \blacktriangle "+"(()" in the control panel 3 seconds, icon \blacksquare II will be in quick blinking, it enters intelligent distribution network mode.

If the WIFI module doesn't connect with the network, after 3 minutes, the icon "**mmm**" will stop blinking and not be displayed, and the intelligent network connection mode will exit. To re-enter the intelligent network connection mode, it need to press again the button "**A**"+" (())" for 3 seconds;

Step 2:

Make your phone connect to WIFI at good network connection status.

Step 3:

Open the "Smart Life" APP, enter into the main interface, click the button "+" in the top right corner or click the button "Add Device". The software then automatically searches for nearby devices.

♦ Step 4:

Enter the interface of "Add device", click "AP Mode" in the top right corner, it will enter interface of "Add Device" under AP mode. Confirm the controller to select the AP network connection mode (icon "___]" is in slow blinking), click "Confirm indicator slowly blink". Then it will Pop up the WIFI connection interface, input the WIFI password which must be the same as the password of WIFI connected to the phone, click "confirm", then it will pop up "connect your mobile phone to the device's hot spot", click "Go connect". It will enter into the connection interface of phone WIFI, connect the "SmartLife-XXX", as per picture shown: SmartLife-801A. After connected successfully, return "Smart Life" APP, the APP will enter into the device connection status automatically, it will complete until the loading up to100%.

Step 5:

After the App successfully connect to the device, as below shown "Device added successfully", you can change the the device name and set the installing location. Then click "Done", it will enter into the device operation interface.

Note: If the connection fails, you can manually enter the AP network connection mode again, and reconnect according to the above steps.

5. APP Function Operation

After the device is successfully added, the user can enter into the device operation interface by going to the main interface and clicking the added device, then below functions can be operated.

Modify the device name

Click button	2	and click "Device Name", can modify the device name.
