1 Wireless Configuration

Before start using the *airconwithme* App, to control your AC unit, you will have to configure the wireless interface of the device.

This section describes how to connect the device to the network via a wireless LAN router or access point.

1.1 Before starting

Check the access point or wireless router where the device will have to be connected to. Make sure that is using 2.4GHz and b, g or n mode for the wireless communication. For specific information about the wireless access point or router, please refer to their corresponding manuals.

Make sure that the device is close enough to the wireless access point or router so there are no coverage issues.

1.2 Device connection to the Air Conditioner Unit

Along with the Device, there is an installation sketch indicating exactly where to connect the cable that comes along with the device. This cable needs to be connected at the Air Conditioning unit in one end and at the device on the other end.

IMPORTANT: Please follow carefully al safety notes and regulations from the Air Conditioning manufacturer before proceeding with the installation of the device.

1.3 App download

The application can be downloaded directly from Google Play (Android devices) or App Store (iOS devices).

Direct access to download links can be found at www.airconwithme.com or

<https://play.google.com/store/apps/details?id=com.intesis.airconwithme&hl=en>

<https://itunes.apple.com/en/app/airconwithme/id1228856890?mt=8>

1.4 Wireless connection

Visit the wireless settings section of your wireless device (smartphone, tablet or laptop) and connect to the network generated by your Device (DEVICE_XXXXXX).

Android version

iOS version

1.5 Wireless device configuration

a.- Open the airconwithme App.

b.- Click on the *add device* button.

IMPORTANT: This view is only available if you are not logged into the account. In case you are already logged in, please log out to get access to this view.

c.- Click on the “Start” button

d.- Select the connection mode

d.i.- Automatic mode

Select the network you want to connect to, from the list of available networks and introduce the corresponding password if required. If your network is not present, please make sure that the access point or router is enabled and properly configured as stated in section 1.1.

d.ii.- WPS mode

In order to go for a WPS connection, please follow instructions of the access point or router to proceed with the pairing of both devices.

e.- Process completed

Once the process is completed, device LED shall follow the following color code status.

If process is not completed as expected, please repeat the process again since the beginning and if problem persist, contact our support team.

2 Using the App

2.1 Register

Click on the “Register” button to create a new account.

Fill in the registration form to create the new account. Do not forget to accept the terms and conditions.

An e-mail will be sent to your e-mail account to validate the registration process.

2.2 User interface

2.2.1 Login

To start using the application, and after the registration process has been finished, you can login with username and password you have introduced during the registration process.

Click on the “Login” button and introduce your username and password.

2.2.2 Control

In this section, you will have access to all devices you have connected to your account.

In order to control each unit, click on the section of the unit you want to control and get access to the different control option for each device.

2.2.3 Scenes

A Scene is a set of actions stored in a unique list that can be executed by just pressing one button.

Define different scenes for different moments of the day (wake up, lunch time, sleeping ...) or situations (party, away, quiet ...) and run them by just pressing a single button.

Define one scene and add all actions from all devices you want to actuate.

2.2.4 Settings

Use this section to:

- a) Change the units setting (Celsius or Fahrenheits)
- b) Select language
- c) Check the about information
- d) Log out from the application (in case you need to add a new device, for instance)
